

Individual Log - Sprint 2  
Darcy McCoy 40234556

Date	Time (minutes)	Task
Feb 10	75	Organize the fullstack code into sub folders.
Feb 11 - 14	120	Update home page so that it has login and register buttons, as well as a welcome message. It's at the base of our domain name.
Feb 12- Mar 5	630	<p>Created a pipeline for continuous integration and deployment. The continuous integration pipeline is set up using Github actions.</p> <p>Appropriate requirements and rules are set on the deployment (including lint test running). These run on push and pull requests on Github.</p> <p>Deployment: Set up the production environment and account using Netlify. A successful PR into the main branch deploys a production build via Netlify. Additionally, PRs aiming towards main will get a preview deployment. This process required extensive debugging because of type issues.</p>
Mar 5	55	Wrote 3 Acceptance Tests for user stories from the first sprint. These acceptance tests outline requirements for a user.
Mar 7	75	Created a honeypot field to prevent spam bots from registering accounts on our deployed website. This is an invisible field on the registration form. If a bot clicks that field then the account registration request is rejected.
